

*“InSiteRx is  
Your Solution  
to Short-Cycle  
Dispensing”*

## INSITERX™

**Talyst’s all inclusive InSiteRx Short-Cycle Dispensing Solution** provides long-term care (LTC) pharmacies with a complete dispensing solution, which includes both remote and centralized options. InSiteRx Remote Dispensing System by Talyst places a secure, freestanding dispensing unit at long-term care facilities. Its accurate, automated technology can quickly dispense pharmacist approved medications at the facility before each medication pass and on-demand to facilitate late admits, STAT orders, first doses, and PRNs.

The InSiteRx Central Fill Dispensing System provides pharmacies with centralized automated dispensing, a technology that Talyst has used in hospital pharmacies for over 10 years. The central fill model is used to dispense automated multi-dose patient specific medication packages in 7-day, 3-4 day, or 2-2-3 day cycles.
