

Rethink medication delivery.

The **Metro SecureRx™ MD** mobile medication system improves your medication delivery practice from the automated dispensing cabinet (ADC) to the patient bedside. Rather than in clinicians' pockets, medications can be stored in individually locking, patient specific drawers. SecureRx MD interfaces with a hospital's information system to reference a common set of data for patient drawer assignment, enabling compatibility with all leading ADCs.

So when you are ready to improve medication delivery... **think Metro.**
