Company Overview

VMI Group in Epe, the Netherlands, encompasses several specialized business lines for tire, rubber, can, and care products, each of them having earned a solid reputation in their respective markets.

The VMI machines are produced in state-of-the-art manufacturing and services facilities in the Netherlands, Germany, Brazil, Poland, and China. Combined with services centers in the USA, Malaysia, and Thailand, we are always close at hand for whatever support may be needed. Our 1,800 people across the globe continuously strive to bring our industries to the next level by providing state-of-the-art, innovative technology to make our customers more successful.

Product Overview

VMI's smart machine technology gives you world-leading solutions for managing the pharmaceutical value chain. From high-performing automated machines to the most advanced management software: VMI has the tools to bring you greater speed, accuracy, and flexibility as you develop a new kind of pharmaceutical strategy.

Delivering the right medicines to the right people at the right time is a top priority. VMI designs and supplies automated smart machines to ensure the best outcomes for everyone.

As pharmacists, you understand exactly why automation in dispensing is so important: for patient safety, regulatory compliance, and competitive advantage. Yet we believe you are not yet satisfied with the options on the market. If you are a high-volume pouch packaging pharmacy and find that operational efficiency is not as high as you expected, or you need too many human interventions to fix problems or make changes, our INDIVION/PHARYS solution could be what you've been waiting for. Our machine has been designed from the ground up to eliminate the common causes of errors (we meet 99.97% accuracy rates and can prove it), all while providing production speed that is not only exceptionally high but also requires a very low level of human touch points as well.

The INDIVION/PHARYS solution provides all of the above, resulting in significantly lower cost-per-pouch, leading to strong ROI and lower Total Cost of Ownership.

VMI PHARYS

Automated solutions of every kind require the most advanced management software, not just to control an individual production system, but to ensure fast, smooth interaction with other production assets. VMI's PHARYS software is a next generation management tool, designed from the ground up for rapid integration without new code, APIs or other specialized programming. It's an extensible, secure platform for managing complex groups of Operational Technology assets.

- Error-free deliveries
- Ability to accept 'last minute' orders
- Reliable deliveries and traceability
- Optimal use of installed equipment

VMI INDIVION

VMI has brought its 30 years of experience in designing highly automated machines to develop what we believe is probably the most advanced and high-performing pouch-based medicines packing system in the world. INDIVION produces up to 10,000 pouches per hour, with an average dispensing accuracy better than 99.97%. The number of pouches that need rework is extremely low when compared with most other machines, with very little risk of cross contamination.

- Exceptionally high capacity of up to 10,000 pouches per hour
- More than 1,000 smart canisters with RFID technology
- Equipped with a reliable and durable industrial robot
- Maximum dropping height of medicines is 21 cm (8 inch)
